stagger prices

3,500 articles – at the best price!

The saving scale makes it possible:

Mix your order from 3,500 different articles and get the best price!

For example:

10 cartons overshoes + 10 cartons caps + 20 cartons disposable gloves = 40 cartons

You will get the **40-carton-price** for ALL products.

Ask now!

You will receive your individual offer immediately, e.g. a call order or framework contract.

Of course, we also send you samples of your desired products.

Simply call **phone: +49 8241 9633-0** or write an e-mail to
verkauf@franz-mensch.de. We look forward serving to you.

Hygiene clothing directly from the manufacturer. For over 45 years.

Franz Mensch is an owner-managed family company in the second generation located in Buchloe in Germany.

For over 45 years we produce and trade world-wide with disposable articles, hygiene clothing and professional safety products.

Choose from a **wide full range** of disposable clothing that perfectly fits your needs – one supplier for everything.

Your big advantage: Franz Mensch delivers so reliably and fast like no one else. Because we have your desired items at **99% in stock**. You order comfortably your desired articles and we do the rest.

We see ourselves as an innovative and growing company with the ambition to continuously improve, to develop new innovative products and to produce and trade sustainably.

Our company is ISO 9001:2015 and FSC™ certified.

5 good reasons for disposable clothing from Franz Mensch

✓ Full range

With around 900 products, Franz Mensch has an unique selection for disposable clothing. Your big advantage: You only need one supplier for all your needs. And if it should be more than the standard? With pleasure! As a manufacturer, we quickly turn your special requests into reality.

✓ 3 strong brands

HYGOSTAR – innovative premium products that meet the highest standards and at the same time offer a good value for money.

HYGONORM – lighter quality, cheaper price. HYGONORM stands for standard products that are reliable and conserve your budget.

HygoBASE – extra cheap disposable clothing made of a special PP mixture. Ideal for those who focus on the price and need products for short-term use.

✓ Service

At Franz Mensch you buy more than just disposable clothing. Save yourself a lot of time and effort and benefit from a unique inclusive service. From storage via call orders and distance delivery to the complete logistics: We do it. Quick, reliable and convenient for you.

✓ Price

No matter which brand product you decide on: with Franz Mensch, the price-performance ratio is right. Your price is even cheaper, if you use the saving scale. Order more items and get the best stagger price for ALL items.

✓ Quality

Of course, our disposable products meet all the required standards. CE, HACCP, or ISEGA: At Franz Mensch you receive certified goods.

Head and face protection

PP, PE or viscose?

The best disposable materials and what they can

PE = polyethylene

PE is very versatile and available in different thicknesses (my). PE is hygienically tight, stretchy and tough. As a clothing, PE protects against liquids. Basically, there are three types:

- LDPE (low density PE): soft and flexible
- HDPE (high density PE): tear-resistant and stiff
- MDPE (medium density PE): stronger than LDPE, but more flexible than HDPE

CPE = chlorinated polyethylene

Chlorination makes PE more durable and stronger. It resists mechanical stress and wetness very well. Ideal as a strong sole for disposable overshoes.

PP = polypropylene

PP is a thermoplastic and acts as a nonwoven like woven fabric. PP nonwoven is breathable and comfortable. It provides light protection against liquids because splashes roll off. HYGOSTAR products are made of pure PP. They are particularly evenly woven and very tear-resistant.

Viscose = regenerated cellulose, which is processed into fabric. Viscose is extremely skin-friendly and the number 1 when it comes to comfort. Clothing made of viscose has a thermo-regulating effect. Your advantage: Sweat is absorbed, less heat accumulation and a pleasant body climate.

SMS = 3-ply material. Two layers of PP fleece enclose a layer of meltblown. SMS is particularly breathable, soft and comfortable.

Nylon = very breathable synthetic fiber with extreme elasticity that adapts to every movement.

Selection guide of materials

material	greatest advantage	waterproof	water resistant (temporary)	breathable	food safe	comfort	durability	price
PE	liquid-tight	✓	✓	–	✓	–	✓	€
CPE	durable	✓	✓	–	✓	–	✓	€€
PP	breathable	–	✓	✓	✓	✓	✓	€€
Nylon	very breathable	–	–	✓	✓	✓	✓	€€€
SMS	extra soft	–	✓	✓	✓	✓	✓	€€€
Viscose	comfort	–	–	✓	–	✓	✓	€€€

Head and face protection – Protection for human and product

Headwear such as caps are standard in hygiene-sensitive areas. Because in order to keep all processes hygienic, scalp and hair must be safely covered.

The challenge: to reconcile hygiene regulations, comfort and not least the price. We at Franz Mensch know that and have the right headwear for your needs.

Caps by Franz Mensch are:

- hygienic
- a reliable protection against contamination
- suitable for food areas
- skin-friendly and latex free
- comfortable, breathable and soft

Different materials

Caps made of PP fleece – This standard product is universally applicable. At Franz Mensch you will find a huge selection of shapes, colours, sizes (extra small or extra large in diameter), price and quality classes.

Caps made of viscose – premium products for highest wearing comfort. Viscose absorbs sweat and ensures less sweating and a pleasant head climate, especially during long periods of wear.

Caps made of nylon – the particularly soft and breathable alternative to PP. Nylon caps are very elastic and lightweight.

Matching supplement: Mouth and beard protection

In order to meet all requirements according to HACCP and IFS, a suitable mouth and beard protection is part of the equipment of your employees. Because breath and saliva can transmit the smallest particles. Experts are talking about the droplet infection here.

With a suitable mouth protection you are on the safe side and reliably protect your products against contaminations.

Body and arm protection – Your selection of aprons, coats, coveralls and oversleeves

Aprons, coats, overalls and Co. have a double protective function: they protect both humans from health hazards and dirt as well as the product, e.g. food, from contaminations.

Protective clothing by Franz Mensch ranges from lightweight disposable aprons that serve as hygiene protection to strong coveralls that protect against viruses and chemical hazards. Of course, all products are certified for the respective application.

Fit and materials are specially designed for daily use in production and processing: Comfortable cut and skin-friendly materials provide freedom of movement and high wearing comfort.

Oversleeves – flexible additional protection

Disposable oversleeves are particularly practical. They can be quickly put on when needed and simply disposed of after use. When it comes to soiling, it is not necessary to change the entire outer clothing. This saves valuable time. Protective sleeves also protect against minor injuries, e.g. by fat splashes or hot liquids.

Tip: Disposable clothing in a finished kit

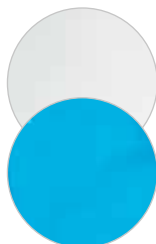

Protection kits consist of a complete protective clothing – from head to toe.

Your advantages:

- Nothing gets forgotten. You have a complete set of gloves, head protection, coats and overshoes.
- immediately ready for use, without preparation time
- hygienic individual packaging for each kit

Foot protection – overshoe machine and overshoes

HACCP prescribes them and for clean rooms they are required: disposable overshoes.

The wearing of overshoes is one of the most important measures against contaminations (loose dust, dirt, infections) in sensitive manufacturing and medical areas.

At Franz Mensch you will find a large selection of disposable overshoes: from very low-priced variants to non-slip overshoes for safer walking on smooth or wet floors.

Often, putting on the overshoes is annoying and quickly becomes a balancing act. The solution: overshoe machines – for a simple but efficient hygiene system.

Overshoe machines are:

- hygienic
- universally applicable
- time saving
- for visitors and staff
- powerful
- economic

Overview of all overshoe machines on page 70.

Foot protection – Overshoes for HYGOMAT

Anyone looking for a long-term hygienic solution for visitors and staff should work with overshoe machines. They are **fast, clean and comfortable** for the user.

The bestseller series HYGOMAT is particularly economical, favourable and has a huge range of suitable disposable overshoes. The overshoe machines are ideal for mobile use because they work without power.

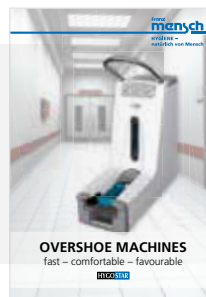

Your advantages:

- **4 times faster** than putting on manually
- very user friendly, no stooping
- easy and fast handling, very quiet
- with handle to hold for even more comfortable donning
- extremely clean, because overshoe is not contaminated by touching it with your hands
- 100% hygienic, no cross contamination

EN Guidance for protective clothing

Protective clothing from Franz Mensch subject to a strict quality control and are regularly certified accordingly.

Personal protective clothing – 3 hazard categories

EUROPEAN LEGISLATION

The Directive specifies protective clothing categories for various hazard levels: “Minimal risks”, “Mortal or irreversible risks” and “Intermediate risks”. To comply with Directive 89/656/EEC, it is important that you determine the risk level and select a glove from the corresponding EN category. This system of identification will assist you in your selection:

CATEGORY I: Protective clothing of simple design

Risk level 1: ONLY FOR MINIMAL RISKS

Gloves of simple design for protection against minimal risks (e.g. domestic gloves) may be tested and certified by the manufacturers themselves. They comply with low protection requirements.

CATEGORY II: Protective clothing of intermediate design

Risk level 2: ONLY FOR INTERMEDIATE RISKS

A test and certification by an independent accredited certification authority / notified body are specified for gloves giving protection against intermediate risks (e.g. gloves for general work with good, abrasion and puncture resistance). Only this notified body is authorised to award a CE marking without which protective clothing may not be put into circulation. Each notified body has its own ID number. Its name and address must be specified in the user instructions enclosed with protective clothing.

CATEGORY III: Protective clothing of complex design

Risk level 3: FOR IRREVERSIBLE OR MORTAL RISKS

Protective clothing giving protection against mortal or irreversible risks (e.g. chemicals) must also be tested and certified by a notified body. In addition the quality assurance system applied by the manufacturer must be audited by an independent body. The body conducting this audit must also be specified by an ID number, e.g. 0321.

Protective clothing of Category 1 and 2 have this mark:

Protective clothing of Category 3 have this mark:

Classes and standards

Type 4 (EN 1512):
Spray dense protective clothes

Type 5 (EN 1398-2):
Particle dense clothes

Type 6 (EN 13034):
Limited spray dense protective clothes

EN 1149-1 / 5: Antistatic
Part 1: Surface resistance
Part 5: Requirement to the material

EN 14126:
Barrier against infectious materials,
biological
dangers

Symbols – what do they mean?

water resistant

breathable

waterproof

food safe

complies to HACCP

with or without electrical power

anti-slip
